Deep Skies Lab and University of Chicago Residence: Philadelphia, PA

Areas of Expertise

General: High-dimensional Bayesian parameter inference; uncertainty quantification; numerical methods; machine learning; simulation-based inference; 1D and 2D signal analysis; wavelet transforms.

Academic: CMB analysis; identification of particle physics beyond the Standard Model; maximizing utility of astrophysical data sets; new physics in stars, extreme astrophysical environments, and cosmological settings.

Employment

University of Chicago Department of Astronomy & Astrophysics after Sept 2022
postdoctoral scholar, member of Deep Skies Lab, associate fellow of KICP

Fermi National Accelerator Laboratory Theory Division Sept 2017 - Sept 2022
postdoctoral associate and Schramm Fellow

C. N. Yang Institute for Theoretical Physics Sept 2014 - Sept 2017
postdoctoral associate

Education

Ph.D., Physics, The University of Michigan, Ann Arbor Aug 2014
Dissertation Advisor: Dr. Kathryn M. Zurek

B.A., Physics and **B.A.,** Math, The University of Pennsylvania Dec 2008
Research Advisor: Dr. Marija Drndic

Awards and Recognition

Fermilab
- Schramm Fellowship 2019
- URA Thesis Award 2015
- Predoctoral Theory Fellowship 2013-2014

The University of Michigan
- Rackham Predoctoral Fellowship 2013-2014

The University of Pennsylvania
- *Summa cum Laude*, with Distinction in Physics 2008
- Benjamin Franklin Scholar and Phi Beta Kappa scholar 2008
- Dean's List all semesters

Publication Statistics

According to the **inSpireHEP** database, as of September 20, 2022:
- 47 research publications and 1 review article
- 9 *Letters* published (7 in the Physical Review, 1 in the Astrophysical Journal, 1 in Physics Letters B)
- one solicited whitepaper for Snowmass 2020; numerous letters of interest for Snowmass 2020 and Astro20 Decadal
- more than 3,900 total citations
- h-index: 28

Code

I have the following programming language skills

- **Proficiency:** Python (`numpy`, `scipy`, `jax`, `numpyro`, `pytorch`, `keras`/`tensorflow`, …), Mathematica, HTML
- **Familiarity:** Cython, CSS, bash, slurm

In addition, I wrote the following code packages:

- `gcepy` is a code for sampling for testing models of the Galactic center excess (GCE). This code relies on jax for all basic definitions, building up to a log-likelihood for the model given the data. The repository provides an ipynb demonstrating how to use two high-dimensional samplers, dynesty and numpyro, to derive constraints on the parameters.

- `dmdd`, ascl:1506.002, is a python package that enables simple simulation and Bayesian posterior analysis of nuclear-recoil data from dark matter direct detection experiments for a wide variety of theories of dark matter-nucleon interactions. `dmdd` was developed in collaboration with Vera Gluscevic for use in arXiv:1506.04454, additionally with Moira Gresham, Annika H. G. Peter, and Kathryn M. Zurek. `dmdd` was used by the PICO collaboration to set official limits in arXiv:1510.07754 [hep-ex]
